

# AURA 2.0

by CORNELL

EMERGENCY RESPONSE SYSTEM

## AURA 2.0 is a comprehensive solution that combines the best of both worlds, both wired conventional and wireless technologies to give you the most robust Emergency Response System available.

AURA 2.0 meets the needs of the **SENIOR HEALTH CARE** market by providing code compliant wired call stations or wireless devices that meet the individual requirements of every facility. AURA 2.0 will monitor, automatically record, document calls and notify staff, by in-house pagers, text message to a cell phone, e-mail or integrate to specific digital phone systems. AURA 2.0 integrates with most wired nurse calls systems, enabling legacy systems to remain in place, while adding data logging and documentation.

For **SCHOOLS** of all sizes, AURA 2.0 can give an added layer of protection to your students, staff and buildings. Staff can call for assistance or be notified of a situation securely and quietly, monitor doors and windows, even refrigerator/freezer temperatures after hours and be notified in seconds of an alarm. Consider AURA 2.0 a 24 hour/7 day a week security guard that doesn't need a break, wages or fringe benefits.

AURA 2.0 can be integrated with the complete line of **CORNELL** Communications products. From simple systems, to life safety systems, AURA 2.0 can help increase your emergency response to unanticipated situations, or basic operations on a daily basis. See for yourself, what it can do for your staff.

In the health care market, AURA 2.0 is constantly monitoring wired or wireless bed stations, bath stations, pendants or devices for alerts or calls for assistance. When a call is received, it is documented and logged for staff response times and assurance that resident's needs are being met.

In schools or other applications, AURA 2.0 monitors panic buttons, window breakage or doors, freezers, etc. documenting activity at all times.

After the call for assistance has been recorded, staff or responders are then notified by a desktop screen, e-mail, text message to a cell phone or in-house pocket pagers. Even after normal hours, staff can be notified of an incident or emergency.

## With AURA 2.0 You have a Choice of Devices Wired or Wireless

Shown are just a few devices available
